Storing the Database File

Most people need access to their passwords across devices. During this section we will find a method for ensuring the .kdbx file is shared and modifiable from one device to the next.

Google Drive

If you have an Android phone and use Keepass2Android, there is integration with Google Drive. This would allow you to sync across.

Dropbox

FileN

SyncThing

Using KeePass in the Browser

Rather than rely on your browser remembering your passwords, you can integrate KeePass with the browser.
