Introduction

Supported systems and software intent.

Supported Systems

Linux is the primary target for this tool. The burden of ensuring this works on Windows & MacOS is too great. This CLI tool was built against Arch and Ubuntu distributions. If there are issues on other Linux distributions, please file an issue

Design Goals

- Slow down news consumption by building a way to create contained digests that encourages people to actually read the articles in their read it later service.
- Ensure that if you use this CLI tool, a person does not need to muck about in their file system if they do not want to.
- Purposefully use flat files for configuration so that tools outside of Wallypub can be used.
